Design Features

- A** Tri-lobe/ Positive Displacement impeller design optimizes flow efficiency and ensures that the blower is only delivering the required discharge pressure and not over-pressurizing the system.
- B** Pressure/ Vacuum components designed for 25 PSIG/ 19" HgVac intermittent duty and 22 PSIG/ 18" HgVac continuous duty giving the user more available pressure/ vacuum to remove line plugs.
- C** Internal oil pump provides lubrication to opposite drive end eliminating the need for multiple fill points and multiple types of lubrication.
- D** Internal cooling fan reduces the expected oil temperature by 30% thereby increasing oil life by 6-8 times.
- E** Speed increasing gear set to ensure optimal blower speed while optimizing truck engine idling speed of 800-1000 RPM.
